

PRE-CONFERENCE WORKSHOP

MOULAGE: PRE-MADE WOUNDS WORKSHOP

22 Oct 2019 (TUES) | 9am – 3pm | Academia, Level 2, WhiteSpace

ABOUT THE WORKSHOP

Moulage provides visual cues to learners and helps to improve the level of realism in a scenario. However, the application of moulage can be costly in terms of time and materials. By learning how to create re-usable wounds, participants can reduce the time and costs required for moulage in their scenarios. In this workshop participants will sculpt a wound, make a negative-impression mould of the wound and then cast a re-usable silicone wound in the mould. Participants will also create re-usable wounds using gel-based products.

LEARNING OBJECTIVES

At the end of the workshop, participants will learn to:

- Demonstrate sculpting techniques to accurately reproduce the physical features of a wound.
- Create a mould and cast a silicone wound.
- Apply a silicone wound to manikin or human.

SPEAKERS

Ms. Kirrian Steer
Executive Director,
SimGHOSTS

Mr. Nick Brauer
Vice-President,
SimGHOSTS

TARGET AUDIENCE

Simulation technicians, educators and all working in medical and emergency training and education.

FEES

SGD321 (inclusive of GST)

Register at www.s3.sg.
Limited seats available.
