

SingHealth Duke-NUS Surgical & Anaesthesia Congress 2019

Incorporating the inaugural SingHealth Duke-NUS Transplant Centre Symposium

GLOBAL SURGERY, GLOBAL PARTNERSHIPS

14 - 24 September 2019 | Academia, SGH Campus

Kidney and Liver Transplant Surgical Workshop

Dr Valerie Gan
Course Director
Consultant
*Department of Urology
Singapore General Hospital*

Dr Tan Ek Khoon
Course Director
Consultant
*Department of Hepato-Pancreato-Biliary Surgery
Singapore General Hospital*

Topics Covered

1. Multi-organ Retrieval
2. Laparoscopic Donor Nephrectomy
3. Techniques in Renal Transplantation and Bench Preparation
4. Living Donor Hepatectomy and Bench Preparation
5. Liver Transplantation
6. Hands-on (Animal)
 - a) Laparoscopic left donor nephrectomy with bench preparation
 - b) Left kidney transplantation
 - c) Laparotomy, hepatectomy and bench preparation of hepatic graft
 - d) Liver transplantation
 - e) Anastomotic options
 - f) Optional right kidney transplantation

21 September 2019, Saturday | 8am – 4.15pm

Singapore General Hospital, Academia
Level 2, Seminar Room L2-S1
Level Basement 1, Procedural Skills Lab 1A

Registration Fees:
\$500 (Trainee)
\$700 (Specialist)
Includes registration to Main Congress

**Prices subject to 7% goods and services tax.*

Introduction

As the need for kidney and liver transplant increases with more awareness on living donation, there is a demand for expertise in transplant surgery to ensure optimal outcomes in transplant recipients as well as donors. Our team of experienced transplant surgeons are equipped to impart tips and tricks essential to performing this intricate procedure of transplantation.

Target Audience

The course is targeted at surgeons or surgical trainees with an interest in solid organ transplantation, planning to participate in donor/recipient surgeries, and wishing to receive specialised training in this field.

Course Objectives

The aim of the workshop is to provide participants knowledge on multi-organ procurement and transplantation procedures in kidney and liver transplantation through lectures followed by a hands-on session where they will be able to perform both retrieval and transplantation of kidneys and livers in live pigs under the guidance of the faculty.
