Introduction

Hip arthroplasty remains an invaluable tool in the management of joint disorders with excellent outcomes in terms of pain relief, functional improvement and patient satisfaction. The aim of this half-day course is to provide participants the opportunity to perform cadaveric hip replacements independently under the supervision and guidance of experienced arthroplasty surgeons. This course is designed for orthopaedic residents who wish to acquire or enhance their hip fracture management and skill development in a realistic setting.

Target Audience

The workshop is specifically targeted for Orthopaedic surgical residents who are seeking on practical understanding.

Course Objectives

This course is designed for surgical residents who wish to acquire and/or enhance their hip fracture management and skill development in a realistic setting. The curriculum includes both lectures and practical sessions.
