Introduction

Anterior approach for the spine is a relatively new approach to spine surgery. This workshop will focus on oblique lateral interbody fusion (OLIF™) procedure and anterior lumbar interbody fusion (ALIF) as well as the insertation of percutaneous pedicle screw specially designed for specialists with an interest in performing spine surgeries and those looking to learn new spine techniques.

Target Audience

This workshop is strongly recommended for Associate Consultants and Final Year Residents. This will allow them to appreciate on how to do the anterior approach – true anterior and lateral anterior.

Course Objectives

Upon completion of the workshop, participants will be able to understand and compare surgical intervention options and indications when performing the OLIF™ procedure. Participants will be given the opportunity to discuss cases and apply the knowledge during the hands-on laboratory session under the supervision of experience trained specialist.
