Inspire for Sleep Apnoea

Clinical Sites:

No mask. No hose. Just sleep.™

Inspire is the only FDA-approved obstructive sleep apnoea treatment that works inside your body to treat the root cause of sleep apnoea with just the click of a button.

How It Works

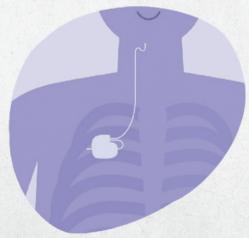

Inspire works inside your body while you sleep. It is a small device placed during a same-day, outpatient procedure. When you are ready for bed, simply click the remote to turn Inspire on. While you sleep, Inspire opens your airway, allowing you to breathe normally and sleep peacefully.

Inspire Sleep Remote

You May Be a Candidate for Inspire If:

- · You have moderate-to-severe obstructive sleep apnoea
- You are unable to use or get consistent benefit from continuous positive airway pressure (CPAP) therapy
- You are not significantly obese
- You are over the age of 18

Why Choose Inspire?

Here are some reasons people like you have chosen Inspire to treat their sleep apnoea.

Alternative to CPAP

Inspire treats the root cause of sleep apnoea by applying gentle stimulation to key airway muscles during sleep, allowing you to breathe normally, and more importantly, sleep without a mask, hose or machine.

Proven Procedure

Inspire is placed under the skin of the neck and chest during a short outpatient procedure. After healing, Inspire is turned on and you will be ready to get the sleep you have been dreaming of.

FDA-Approved

Inspire was FDA-approved in 2014 and has been proven both safe and effective in multiple clinical studies. It is the only FDA-approved obstructive sleep apnoea treatment that works inside the body with just the click of a button.

Patient Outcomes

Inspire is safe, clinically proven, and FDA-approved.

90% of bed partners report no snoring or soft snoring.¹

79% reduction in sleep apnoea events.¹

94% of people are satisfied with Inspire.²

96% of Inspire patients say Inspire is better than CPAP and would recommend Inspire

Inspire is not for everyone. Talk to your doctor about risks, benefits and expectations associated with Inspire. Risks associated with the surgical implant procedure may include infection and temporary tongue weakness. In rare cases tongue paresis and atrophy may occur. Some patients may require post implant adjustments to the system's settings in order to improve effectiveness and ease any initial discomfort they may experience. Important safety information and product manuals can be found at inspiresleep.com/safety-information.
